

# DX8X EXCHANGE

DECENTRALIZED DIGITAL  
BANKING MADE SIMPLE.

# ✕ INTRODUCING DX8X

DX8X Exchange offers clients a multifunctional decentralized platform, representing a hybrid system combining digital and traditional currencies.

Our mission is to revolutionize digital currency exchanges by simplifying the process of transacting across blockchains and FIAT.

# ✕ PROBLEM STATEMENT

Cross-blockchain trading is an eleven-to-nineteen step process. This is the most significant barrier to adopting new users into the decentralized market.

This multi-step method results in excessive gas fees and a mass potential of lost tokens.

Merchants face overpriced transactional fees through centralized Point of Sale (POS) systems.

# ⌘ HOW DX8X SYSTEM OPERATES

## UNIQUE FEATURES

### Swap & Send

- Our exclusive, most straightforward method to cross-exchange between blockchains, FIAT, and Web3; with simplicity.

### Transactions:

- Our node implementation starting point can maintain 500 transactions per second at lightning speeds with a 0.01% chance of failure.
- All transactions are in-house. Users can use Apple pay, debit card, credit card, and bank deposits/withdrawals.
- Liquidity staking is available.
- Our POS API allows all USD digital transactions to go directly in merchants' exchange wallet as FIAT rather than batching to a bank account.

### Consumer Protection:

- We will only allow top-quality and creditworthy cryptos/FIATs to list within our exchange for the sake of added security and simplicity. We are currently in discussion with LossLess to develop added layers of protection.

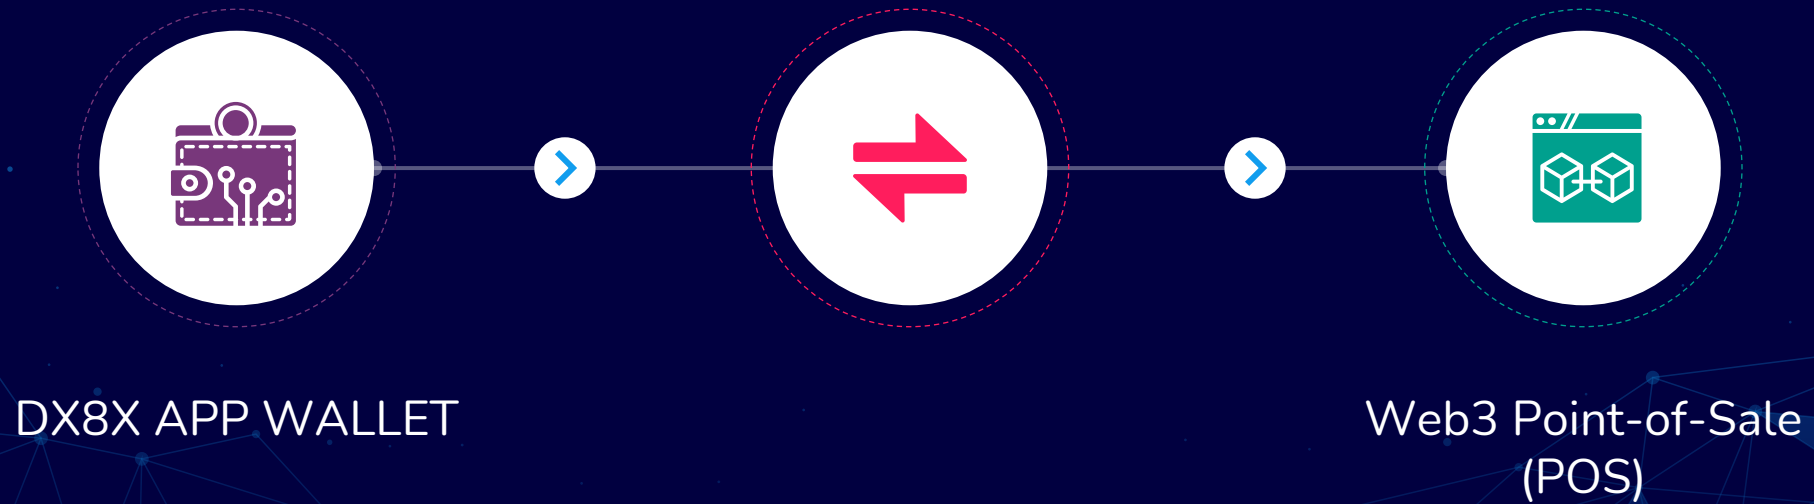

# SYSTEMS IN USE

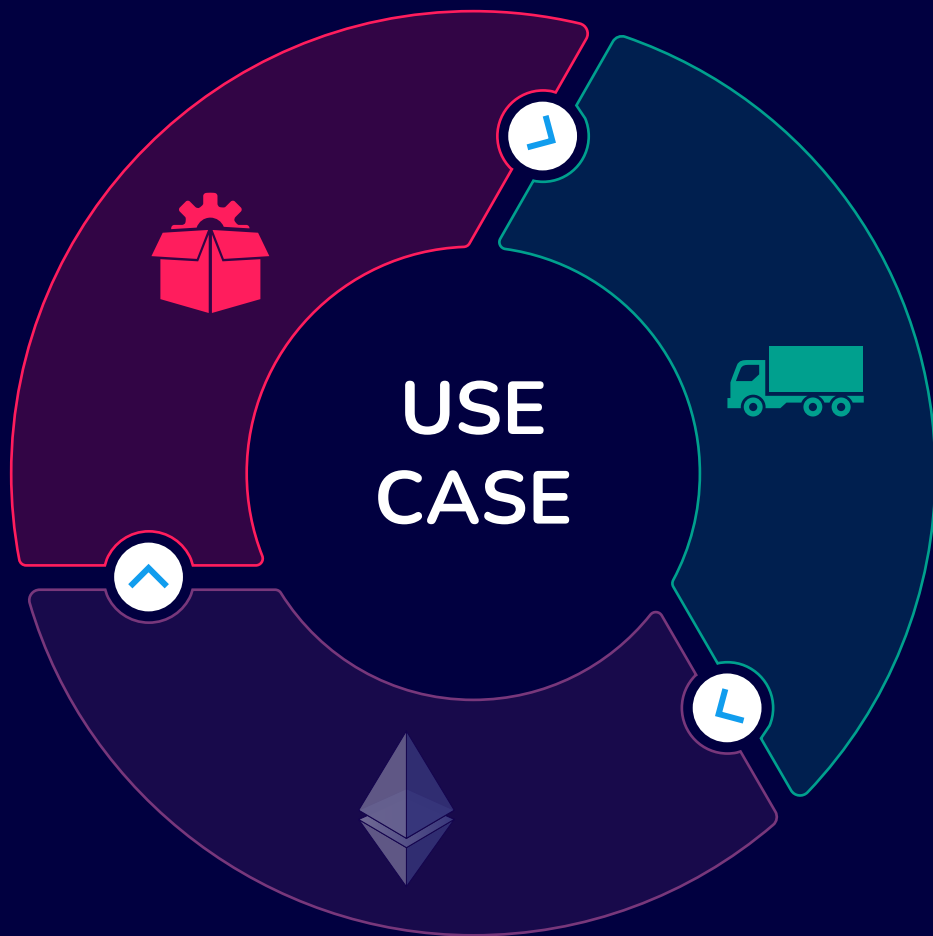

We have secured technology implementation with ANKR, WYRE, TransAKT, and LossLess.

## HOW DX8X WORKS

SWAP & SEND

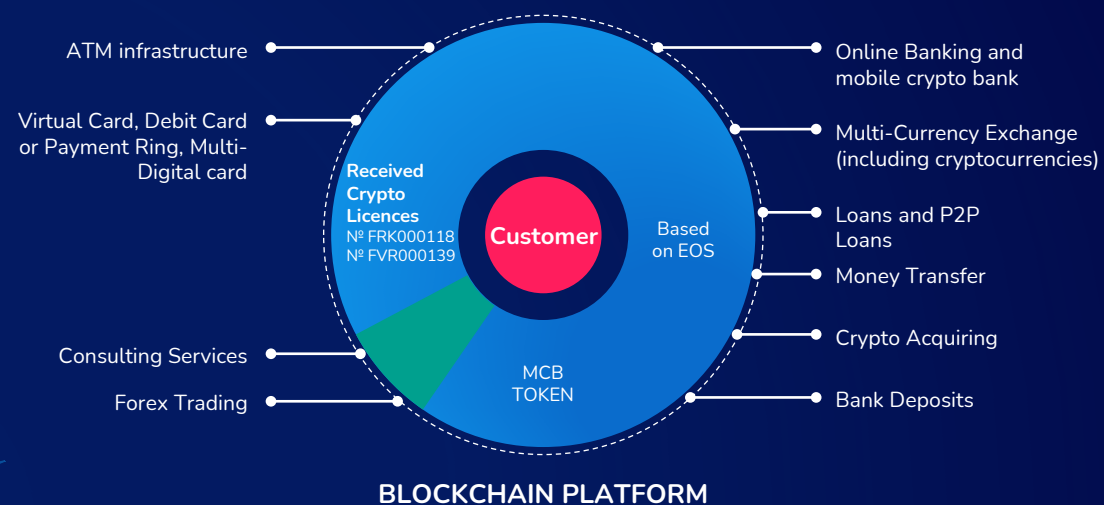

## Main service, available for all clients of DX8X Exchange:

1. Wallet (mobile cryptobank);
2. Bank card and Payment Rings;
3. Exchange of cryptocurrency/ cryptocurrency, cryptocurrency / fiat;

# ⌘ TRACTION ACHIEVED SO FAR

# ⌘ 2023 ROADMAP

Q1

- Complete alpha & beta testing
- Launch on CoinMarketCap

Q2

- Deploy exchange to the public

Q3

- Begin Point-of-Sale (POS) system and WebApp Development

Q4

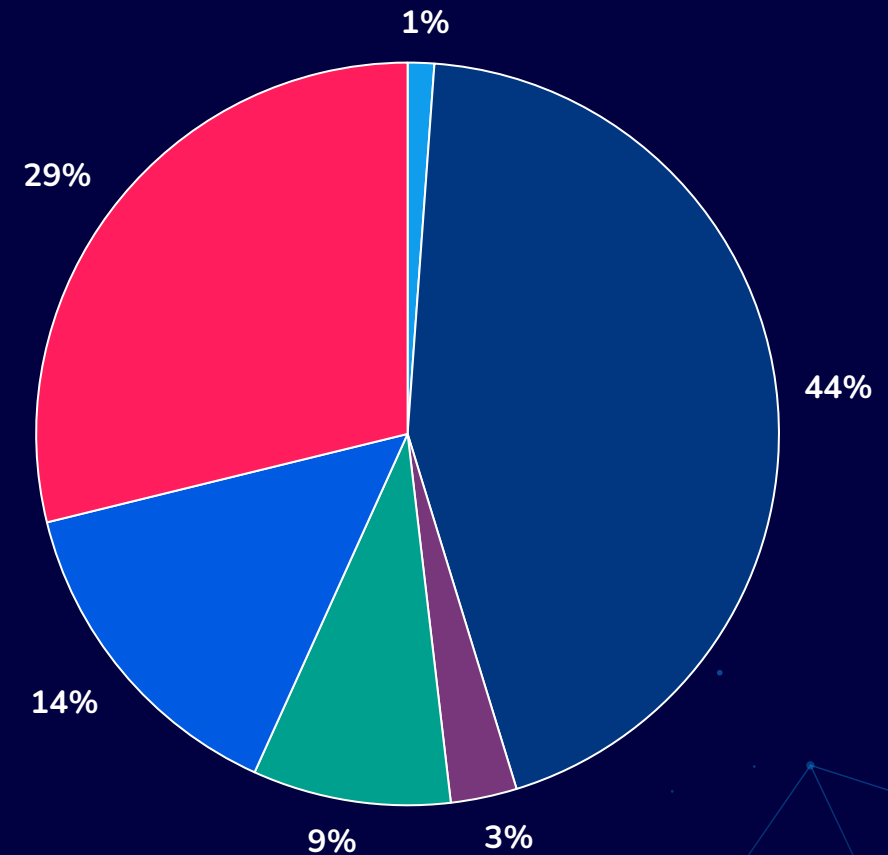

- Begin blockchain development. Powered by renewable-energy

# OUR ASK & UTILIZATION

Raising \$20 million against XX% equity.

	\$
Capital Expenditure	7,650,000
Legal Costs	200,000
